Software Development and Analysis Project Proposal

Project Title
Clothing Store

Group Members:

Member Name:	Roll Number:
Syed Muneeb Rizvi	21K-4924
Usman Rasheed	21K-3225

Abstract:

Our project idea is to create an emulation of a clothing store website, similar to websites such as Outfitters or Khaadi, the website would emulate a user signing up to the website, adding clothes to their cart and then entering their shipping details to receive their desired clothing apparels.

Functions:

The functions that the project would include would be:

- A **Search Bar**
- A **Homepage** to view clothes
- A **Filter** option to filter according to your needs
- A **Sort** option to sort according to prices or popularity
- A **Product Detail Page**, where you select the details of the clothe you decide to buy

- Clothes would have the ability to come in different **Variations**, allowing the user to select the gender, the size and their desired color
- A **Cart** option where you can view what you've selected
- A **Checkout Form** to order your items, and inputting your user details
- A **Track Your Order** option to view your order
